EDUCATION

University of Ghana- Legon, Accra, Ghana

Graduating Aug 2027

Major: Computer Science and Mathematics

Academic Standing: First Class (3.86/4.00)

Relevant Coursework: Introduction to Computer Science, Computer Hardware Fundamentals and Logical Circuits, Programming Fundamentals, Office Productivity Tools, Programming I, Database Fundamentals, Calculus I & II, Computational Math, Software Engineering

EXPERIENCE

Global Code | Participant | In-Person

August, 2024 - September, 2024

- Collaborated with a team to explore and develop foundational skills in **Raspberry Pi, Python Programming, and Flask**.
- Built a **Security Door System** using MQTT for communication and integrated it with hosting platforms for remote access.
- Demonstrated strong **analytical, communication, and teamwork** skills in a hands-on, problem-solving environment.

Turntabl | Intern | In-Person

March, 2025 - May 2025

- Built and tested **RESTful APIs for an in-house project** using **Spring Boot**, integrated with **PostgreSQL**, and ensured functionality with **JUnit** and **Mockito** unit tests.
- Gained hands-on experience in **containerization using Docker, API debugging**, and followed **best practices in backend development**.
- Collaborated with Software Engineers in **daily standups, sprint planning, and code reviews**, receiving mentorship and improving skills in **clean code, testability, and software design principles**.

Polymorph Labs | Intern | In-Person

October, 2025 - December, 2025

- Developed frontend projects using **TypeScript** and **React**, building clone pages of real-world web applications to strengthen skills in component-based architecture, responsive design, and clean UI development.
- Built and tested backend features with **Express.js** and **MongoDB**, working on CRUD operations, API integration, and database management while improving understanding of full-stack development workflows.
- Collaborated with developers on project reviews and app testing sessions, gaining practical experience in code optimization, problem-solving, and applying best practices in scalable web application development.

Innovotech Lab | Program Coordinator | Hybrid

January, 2025 - Present

- Coordinated **STEM and tech mentorship programs** for high school and university students, helping them gain hands-on skills in programming and digital tools.
- Designed and led **workshops and training sessions** making complex concepts easy for beginners to understand.

SKILLS AND INTERESTS

- **Languages:** Python, Java, HTML, CSS, Javascript, Typescript
- **Frameworks & Tools:** Spring Boot, Spring Security, Django, Django Rest Framework, React, Express JS, Git, GitHub, GitLab
- **Databases:** PostgreSQL, SQLite, MongoDB

- **Testing:** JUnit, Mockito

PROJECTS

Security Door System | MQTT, Flask, HTML and CSS

[Github Link](#)

- Developed a **Security Door System** using **Raspberry Pi**, **MQTT**, and **Flask**, integrating a motion sensor to detect human presence
- Implemented a **web camera feed** to provide real-time video to the web app and store snapshots in a database for tracking access events.
- Utilized **HTML** and **CSS** to create an intuitive interface for monitoring and managing door access effectively.

Book Review API | Django, Django Rest Framework, SQLite

[Github Link](#)

- Developed a **Book Review API** using **Django**, **Django Rest Framework**, and **SQLite**, providing CRUD operations for books, users, and reviews.
- Implemented **user authentication** and **authorization** with DRF Tokens, ensuring secure access to different endpoints.
- Designed and built robust endpoints for managing books, users and reviews, streamlining the process for users to interact with the system.

URL Shortener | Spring Boot, Spring Security, PostgreSQL

[Github Link](#) [URL Shortener Website](#)

- **Built** the backend of a **URL shortener application**, implementing **CRUD operations** for creating, reading, updating, and deleting shortened URLs.
- **Integrated PostgreSQL** for persistent data storage and designed a structured schema to manage URLs efficiently.
- **Implemented user authentication and security** features to protect URL data and ensure authorized access.
- **Added website using Vite and React** with dummy data.

CAMPUS INVOLVEMENT AND LEADERSHIP

- **HeadStarter AI Community**, *Member*, University of Ghana January 2025 - Present
- **PyClub UG**, *Co-Lead*, University of Ghana February 2025 - Present
